AMENDMENTS TO THE CLAIMS

LISTING OF CLAIMS

This listing of claims will replace all prior versions and listings of claims in the Application.

1. (Previously Presented) A method for enabling a user to refine a search query using a graphical user interface, the method comprising the steps of:

presenting a graphical user interface to a user;

enabling a user to selectively input search parameters into a first search query using the graphical user interface, wherein the step of presenting further comprises the steps of:

receiving the first search query;

searching at least one database for objects that satisfy the first search query; determining whether at least one object stored in the database satisfies the first search query;

retrieving a first search result comprising the at least one object if a determination is made that the at least one object satisfies the first search query;

determining a type of information included in the at least one object associated with the first search result;

determining at least one search refinement option based on the type of information determined: and

searching the first search result for objects that satisfy a second search query, the second search query comprising the at least one search refinement option.

- 2. (Original) The method of claim 1, further comprising the step of: presenting the at least one search refinement option to the user.
- 3. (Original) The method of claim 2, wherein the at least one search refinement option is presented in a drop-down menu.

Application Serial No.: 10/043,098 Attorney Docket No.: 042846-0313073 Reply Under 37 C.F.R. §1.116

- 4. (Original) The method of claim 2, further comprising the step of: enabling the user to select the at least one search refinement option.
- 5. (Previously Presented) The method of claim 4, further comprising the step of: enabling the user to input the second search query comprising the at least one search refinement option.

6. (Cancelled)

7. **(Previously Presented)** A system for enabling a user to refine a search query using a graphical user interface, the system comprising:

presenting means for presenting a graphical user interface to a user;

search parameter inputting means for enabling a user to selectively input search parameters into a first search query using the graphical user interface;

receiving means for receiving the first search query;

searching means for searching at least one database for objects that satisfy the first search query;

first search query determining means for determining whether at least one object stored in the database satisfies the first search query;

retrieving means for retrieving a first search result comprising the at least one object if a determination is made that the at least one object satisfies the first search query;

information type determining means for determining a type of information included in the at least one object associated with the first search result;

search refinement option determining means for determining at least one search refinement option based on the type of information determined; and

second search query inputting means for enabling the user to input a second search query comprising the at least one search refinement option, that searches the first search result for objects that satisfy the second search query.

Application Serial No.: 10/043,098 Attorney Docket No.: 042846-0313073 Reply Under 37 C.F.R. §1.116

- 8. (Original) The system of claim 7, further comprising search refinement option presenting means for presenting the at least one search refinement option to the user.
- 9. (Original) The system of claim 8, wherein the at least one search refinement option is presented in a drop-down menu.
- 10. (Original) The system of claim 8, further comprising search refinement option selecting means for enabling the user to select the at least one search refinement option.
- 11. (Cancelled)
- 12. (Cancelled)
- 13. (Previously Presented) A system for enabling a user to refine a search query using a graphical user interface, the system comprising:
 - a presenting module that presents a graphical user interface to a user;
- a search parameter inputting module that enables a user to selectively input search parameters into a first search query using the graphical user interface;
 - a receiving module that receives the first search query;
- a searching module that searches at least one database for objects that satisfy the first search query;
- a first search query determining module that determines whether at least one object stored in the database satisfies the first search query;
- a retrieving module that retrieves a first search result comprising the at least one object if a determination is made that the at least one object satisfies the first search query;
- an information type determining module that determines a type of information included in the at least one object associated with the first search result;

Application Serial No.: 10/043,098 Attorney Docket No.: 042846-0313073 Reply Under 37 C.F.R. §1.116

a search refinement option determining module that determines at least one search refinement option based on the type of information determined; and

a second search query inputting module that enables the user to input a second search query comprising the at least one search refinement option, that searches the first search result for objects that satisfy the second search query.

- 14. (Original) The system of claim 13, further comprising a search refinement option presenting module that presents the at least one search refinement option to the user.
- 15. (Original) The system of claim 14, wherein the at least one search refinement option is presented in a drop-down menu.
- 16. (Original) The system of claim 14, further comprising a search refinement option selecting module that enables the user to select the at least one search refinement option.
- 17. (Cancelled)
- 18. (Cancelled)
- 19. (Previously Presented) A processor readable medium comprising processor readable code embodied therein for causing a processor to enable a user to refine a first search query using a graphical user interface, the medium comprising:

presenting code that causes a processor to present a graphical user interface to a user;

search parameter inputting code that causes a processor to enable a user to selectively input search parameters into a first search query using the graphical user interface;

receiving code that causes a processor to receive the first search query;

searching code that causes a processor to search at least one database for objects that satisfy the first search query;

first search query determining code that causes a processor to determine whether at least one object stored in the database satisfies the first search query;

retrieving code that causes a processor to retrieve a first search result comprising the at least one object if a determination is made that the at least one object satisfies the first search query;

information type determining code that causes a processor to determine a type of information included in the at least one object associated with the first search result;

search refinement option determining code that causes a processor to determine at least one search refinement option based on the type of information determined; and

second search query inputting code that causes a processor to enable the user to input a second search query comprising the search refinement option, that searches the first search result for objects that satisfy the second search query.

- 20. (Original) The medium of claim 19, further comprising a search refinement option presenting code that causes a processor to present the at least one search refinement option to the user.
- 21. (Original) The medium of claim 20, wherein the at least one search refinement option is presented in a drop-down menu.
- 22. (Original) The medium of claim 20, further comprising search refinement option selecting code that causes a processor to enable the user to select the at least one search refinement option.
- 23. (Cancelled)
- 24. (Cancelled)
